## MA Center for Unexpected Infant and Child Death

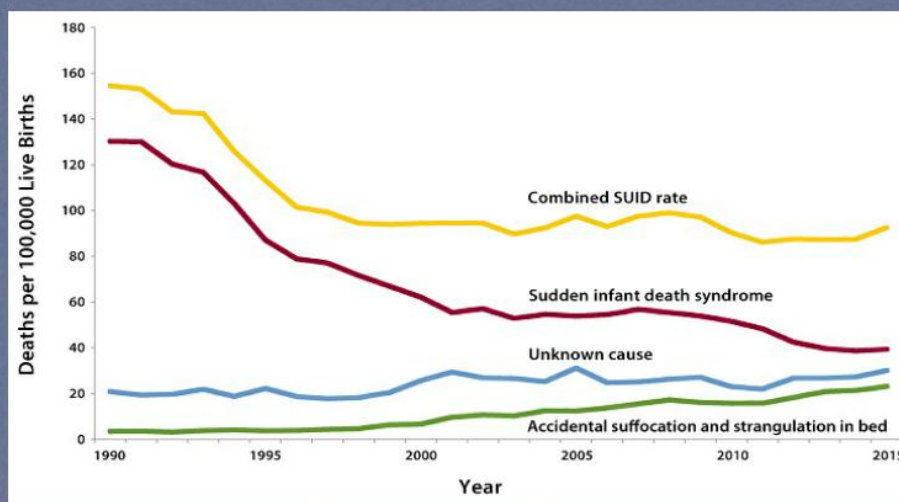

### Breakdown of Sudden Unexpected Infant Death by Cause, 2015

43% of Sudden Unexpected Infant Deaths (SUID) are classified as SIDS. Unknown Cause is the second most common type of death, followed by Accidental Suffocation and Strangulation in Bed.

Unknown Cause: Sudden death of an infant that remains undetermined because one or more parts of the investigation was not complete.

### Trends in Sudden Unexpected Infant Death by Cause, 1990-2015

Produced by: The Massachusetts Center for Unexpected Infant and Child Death

We support families, communities, and professionals after an unexpected death during pregnancy, infancy, or early childhood. Please visit <http://www.magriefcenter.org>
